

We are forming the future of finance.

Canada's neutral, regulated settlement layer for tokenized real-world assets.

We are not just building a company. We are building the **foundation the real-world asset economy will settle on**, the layer that makes a transfer final and legal across two institutions, in Canadian dollars. The goal is an enterprise built to last a hundred years. The only way to build something that lasts is to scout, vet, and hand-pick the best, and bring them together into the 4orm family to execute what could be one of the greatest Canadian endeavors ever attempted.

WHAT WE ARE BUILDING

4orm is core financial market infrastructure: a regulated control plane where Canadian institutions **issue** tokenized deposits and assets, **trade** them in a supervised venue, **settle** delivery-versus-payment with legal finality, and **comply** by design, with the canonical ledger and the rules owned by us and the compliance authority never delegated. Own the title, the cash leg, and the rules, and you can settle anything.

\$3M PRE-SEED, OPENS JULY 1 2026	\$10M PRE-MONEY VALUATION	\$127.1M MODELED 5-YR REVENUE, FOUR NAMED INSTITUTIONS (MANAGEMENT MODEL)	\$20.3M/yr RECOVERABLE SETTLEMENT AND COMPLIANCE DRAG PER INSTITUTION MODEL, 186 INSTITUTIONS
---	--	--	--

THE WINDOW IS OPEN, AND THE RECEIPTS

The proof landed, even in Canada. The Bank of Canada's Project Samara settled a C\$100M tokenized bond with RBC, TD, and EDC under OSC, AMF, and CIRO sign-off. CIRO published a custody framework; the CSA launched Project Tokenization. Validate, permit, build: the build window is open now.

A live institutional relationship. In active discovery with a Crown-affiliated Canadian financial institution (about \$43.3B in deposits). No signed agreement yet; this is real business development, described honestly.

Serious legal and advisory backing. Two of Canada's leading securities law firms on retainer, with significant capital already committed to the legal and regulatory foundation. Advisory bench includes a senior systems leader from the SWIFT network. Two patents in development.

THE TEAM WE ARE FORMING

Passion. Performance. Massive accountability. Truth. Sovereignty. Protecting the people, at all costs.

The 4orm family is a team of people who came together on purpose. We do not hire to fill seats. We hand-pick operators whose careers have already solved the exact problems this build demands, and we hold each other to a standard most companies never reach. Everything is written down, every promise is on the table before you sign, and the mission is bigger than any one of us: keeping the rails of Canada's financial future Canadian-owned, regulated, and built to endure.

If you are reading this, we think you might be one of us. The room is open, the case is documented end to end, and the founders read every request. Data room: www.4ormdr.com • compliance@4ormfinance.com

Where we are: done, and underway.

Roughly a third of the way to an operating, regulated exchange, and moving every week. A **\$44,000 founding cheque** has already produced an estimated **\$111,000 to \$264,000** of finished, secured value. Below is what is done, and what is underway now, tracked weekly across nine workstreams.

NINE WORKSTREAMS, AT A GLANCE

WHAT WE HAVE ACCOMPLISHED

Institutional architecture, validated. Canonical ledger, compliance engine, token registry, treasury, and delivery-versus-payment, scored 7.5/10 on fit by an independent architect.

A live institutional demo. Simulates roughly 191 institutions on real financials, KYC through settlement finality, with a savings calculator.

The full investor room. Four web properties, a white paper, an executive summary, a 16-page Runway Briefing, and an organized data room.

Regulatory pathway mapped. CSA, OSFI, CIRO, and FINTRAC mapped to the architecture; already in the room at the CSA Calgary tokenization event.

A bench with receipts. Two leading securities firms (Fasken and Osler), a 30-year capital-markets advisor, the original SWIFT-network development lead, and a CFA who audited the model.

Pipeline and round. 191 institutions mapped; two Alberta deposit-takers (ATB and Bow Valley) in active discovery. The \$3M pre-seed is structured at a \$10M pre-money, first capital committed.

WHAT WE ARE BUILDING NOW

Architecture to execution-ready. Finalizing the build pack for partners, regulators, and engineering, on a roughly 90-day target.

Full-time technical team. Recruiting the founding engineering bench: a founding CTO, a principal engineer, and a security and compliance architect.

Opening the raise. The \$3M pre-seed opens July 1, 2026; the BC tax-credit application and subscription documents are in progress.

Institutional conversion. A second ATB meeting and a due-diligence package, with the first outreach batch live across the mapped list.

Regulatory filings. Mapping the FINTRAC and sandbox pathway, with a compliance review underway alongside counsel.

Non-dilutive capital. First grant applications (SR&ED and fastest-fit programs) being prepared.
